The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply						
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Response to Arguments

Applicant's arguments filed 1/26/2006 have been fully considered but they are not persuasive. The applicant argues that he prior art does not teach the new limitation that "in the first mode of operation, the motor is disengaged from the camera assembly".

The examiner disagrees with the applicant. The examiner views the limitation broadly. Furthermore, the limitation merely states the motor is disengaged, and does not give specifics as to any mechanical or electrical process of disengaging. Furthermore, Senba et al teaches in the (English abstract translation) on Paragraph [0018] that in order for the eccentric member (151b) to move the lens, the eccentric member is projected until the eccentric member collides with the lens system. Therefore, the state in which the eccentric member is not projected or in collision with the lens system is viewed by the examiner as a state in which the motor is disengaged.

The common knowledge or well-known in the art statement presented in the rejection of Claim 10 is taken to be admitted prior art because applicant failed to traverse the examiner's assertion of Official Notice.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.
- 1: Claims 1, 2, 11, 13, 19 and 20 are rejected under 35 U.S.C. 102(a) as being anticipated by JP 2003-315656 Senba et al (English abstract translation).

Application/Control Number: 10/729,041

Art Unit: 2622

Claim 1: As for Claim 1, Senba et al depicts in Figures 1-3 and teaches on Paragraphs [0006 and 0023] an electronic device comprising: a focusable camera assembly (153) paragraph [0006]; and a motor (151a) operable between a first mode (vibrate mode) of operation in which it provides a vibration feature and a second mode of operation in which it adjusts the focus of the camera assembly. Senba et al teaches on Paragraph [0018] that in order for the eccentric member (151b) to move the lens component (152), the eccentric member (151b) is projected until the eccentric member collides with the lens system. Therefore, in the first mode of operation (vibrate mode), the motor (151a) is disengaged from the camera assembly (152).

Page 3

- 3: Claim 2: In regards to Claim 2, Senba et al teaches on Paragraph [0023] and depicts in Figure 1 the device is a cell-phone which is a radio communication device.
- 4: Claim 11: As for Claim 11, Senba et al teaches on Paragraph [0025 and 0006] and depicts in Figure [2] the focusable camera assembly (152) includes a fixed camera (image sensor CCD) and an adjustable lens assembly (153) that can be adjusted by the motor (151a).
- Claim 13: As for Claim 13, Senba et al depicts in Figures 1-3 and teaches on Paragraphs [0006 and 0023] a method for providing both camera focus (153) and vibration functionality to a radio communication device (cell-phone) having a camera (CCD), comprising the steps of: determining if a vibration mode or a camera focus mode is desired; causing a motor (151a) to vibrate if the vibration mode is desired in step (a); and causing the same motor (151a) used in step (d) to focus (153) the camera (CCD) if the camera focus mode was desired in step (a). Senba et al teaches on Paragraph [0018] that in order for the eccentric member (151b) to move the lens component (152), the eccentric member (151b) is projected until the eccentric member

Art Unit: 2622

collides with the lens system. Therefore, in the first mode of operation (vibrate mode), the motor (151a) is disengaged from the camera assembly (152).

- 6: Claim 19: As for Claim 19, Senba et al teaches on Paragraph [0023] the radio communication device comprises a cellular telephone.
- 7: Claim 20: In regards to Claim 20, Senba et al teaches on Paragraph [0016 and 0027] a controller sends a signal to the motor that causes it to be in the vibration mode or the camera focus mode.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 8: Claim 10 is rejected under 35 U.S.C. 103(a) as being unpatentable over JP 2003-315656
 Senba et al.
- 9: Claim 10: In regards to Claim 10, Senba et al teaches the use of a cell-phone which uses a common motor to perform a vibration feature to inform a user of an incoming call and to perform a focus control of a built in camera. However, Senba et al is silent as to the type of motor and does not teach that he motor can be an electric brush motor.

Official notice is taken that it was well know in the art at the time the invention was made to use electric brush motors in cell phones to enable the phone to have a vibrate function.

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to use an electric brush motor for the motor in Senba et al since it was common practice to do so.

Allowable Subject Matter

10: Claims 3-9, 12, and 14-18 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to James M. Hannett whose telephone number is 571-272-7309. The examiner can normally be reached on 8:00 am to 5:00 pm M-F.

Art Unit: 2622

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David Ometz can be reached on 571-272-7593. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
